

```
std::conjunction< std  
::uses_allocator< utils  
::segment_tree< Args...  
>::key_container_type,  
Alloc >, std::uses_allocator  
< utils::segment_tree< Args...  
>::mapped_container_type, Alloc > >
```

```
std::uses_allocator  
< utils::segment_tree  
< Args... >, Alloc >
```

A diagram illustrating a template substitution. A blue arrow points from the `std::uses_allocator` box on the right to the `std::uses_allocator` argument within the `std::conjunction` template in the left box.
