

utils::default_binary
_op_traits

```
graph BT; A["utils::shift_behavior<br>::default_binary_op_traits"] --> B["utils::default_binary_op_traits"]
```

The diagram illustrates a relationship between two C++ utility classes. At the bottom is a gray-shaded box representing the `utils::shift_behavior` class, which contains a static member `default_binary_op_traits`. A blue arrow points upwards from this box to a white box above it, representing an unnamed class that inherits from `utils::shift_behavior`. The unnamed class contains its own static member `default_binary_op_traits`, which is the one being referenced in the code snippet above.

utils::shift_behavior
::default_binary_op_traits
