

utils::default_binary
_op_traits

```
graph BT; A["utils::shift_behavior<br>::default_binary_op_traits"] --> B["utils::default_binary_op_traits"]
```

The diagram illustrates a relationship between two C++ utility classes. At the bottom is a gray-shaded box representing a derived class, `utils::shift_behavior`, which contains a static member `::default_binary_op_traits`. A blue arrow points upwards from this box to a white box above it, representing the base class `utils::default_binary_op_traits`. This indicates that the `shift_behavior` class inherits or overrides the `default_binary_op_traits` from its base class.

utils::shift_behavior
