

utils::shift_ops< {} >

utils::shift_asg_ops
< {} >

utils::shift_full_ops
< Funcs, AsgFuncs >

```
graph BT; A[utils::shift_full_ops< Funcs, AsgFuncs >] --> B[utils::shift_ops< {} >]; A --> C[utils::shift_asg_ops< {} >];
```

The diagram illustrates a relationship between three C++ template types. At the bottom is a grey box containing 'utils::shift_full_ops < Funcs, AsgFuncs >'. Two blue arrows point upwards from this box to two white boxes above it. The left white box contains 'utils::shift_ops< {} >' and the right white box contains 'utils::shift_asg_ops < {} >'. This suggests that 'utils::shift_full_ops' is a specialization or inherits from both 'utils::shift_ops' and 'utils::shift_asg_ops'.
